## EDUCATION

---

**Columbia University**, *Bachelor of Science, Mechanical Engineering* New York, NY; Sep 2020 – May 2024  
GPA 4.07/4.0, TBP Engineering Honor Society, Mechanical Engineering Certificate of Merit, Magna Cum Laude  
Non-Standard Courses: Managing Tech Innovation, Robotics Studio, Human-Centered Design, Public Speaking

## WORK EXPERIENCE

---

**Boeing**, *Space Electronics and Mechanical Product Design Engineer* Los Angeles, CA; August 2024 – Present

- Responsible for the mechanical design, integration, and production support of spacecraft control electronics
- Developed integration solutions to meet electrical, thermal, and spatial constraints
- Designed hardware and software tools to improve production and evaluation efficiency
- Led and analyzed tests of spacecraft flight hardware
- Served as Responsible Engineering Authority for Preliminary Reviews of flight hardware
- Acted as production support lead, coordinating engineers and reviewing millions in flight hardware

**Airobotics Drones**, *Design Engineering Intern* Tel Aviv, Israel; May 2023 – Jul 2023

- Worked on a 5-person team to build the Iron Drone, an autonomous, drone-catching UAV
- Analyzed, tested, and optimized UAV's net launcher for range and reliable interception
- Designed, prototyped, and constructed a new industrial drone ground station
- Optimized drone ground station design, cutting assembly time from 2 weeks to 2 days
- Engineering contributions used in Iron Drone systems sold globally for \$25M+ and exhibited by the U.S. DOT

**Terabase Energy**, *Mechanical Engineering Intern* Davis, CA; May 2022 – Aug 2022

- Collaborated on and field-tested robotic vehicles to transport and install solar panels in utility-scale projects
- Designed a solar panel installation mechanism that more than doubled installation range
- Built a panel stabilization system that replaced high-cost linear actuators with low-cost, durable mechanisms
- Engineering contributions used in automated solar installation factories that have installed 40+ MW of panels

**Columbia Bartending Agency**, *Bartender* New York, NY; Dec 2022 – June 2024

## LEADERSHIP & ENGINEERING CLUBS

---

**Columbia Space Initiative**, *Rockets Mission Lead* Sep 2020 – Jun 2024

- Led a 50-person team to research, design, and build a hybrid rocket to reach 30,000 ft with a scientific payload
- Organized meetings, goals, and project timelines, allowing for rapid testing of innovative designs
- Coordinated design and integration meetings, fostering cross-functional collaboration and creative ideas
- Cultivated and communicated with industry partners to raise over \$15,000 in sponsorships
- Designed, manufactured, tested, and integrated the rocket electronics and recovery systems
- Led Rockets' first successful flight and recovery, improved engine performance by 10x, and doubled team size
- Built a talented team that later became the first US student-led group to launch a liquid-oxygen hybrid rocket

## ENGINEERING DESIGN PROJECTS

---

**Automated Robotic Linkage – Machine Design** Sep 2023 – Dec 2023

- Worked on a team to design, build, and control a complex linkage mechanism to rapidly press arcade buttons
- Designed a unique, cable-driven mechanism unlike any our professor had seen, greatly reducing inertia

**Bipedal Walking Robot** Jan 2022 – May 2022

- Designed, manufactured, and programmed a bipedal robot using SolidWorks, 3D printing, and a Raspberry Pi
- Achieved the first and fastest walking robot in a class of significantly more experienced engineers

## SKILLS

---

**Technical Skills:** CAD (SolidWorks, Creo, Fusion), PCBA Design (Xpedition, Eagle), MATLAB, Excel, Python, C++, FEA, GD&T, CAM, DFM, DFA, Product Design, Human-Centered Design, Root Cause Analysis, Production Support  
**Non-Technical Skills:** Project Management, Public Speaking, Presentations, Collaboration, Communication
